Abstract

Education and compatibility both variables are fundamental to the development and progress of the close corporation's relationship with the spiritual intelligence. The aim of this study was to investigate the relationship between spiritual intelligence and adaptability academic self-efficacy is based on qualitative research and review articles. The results showed a positive and significant relationship between spiritual intelligence and self-education as well as a positive and significant relationship between spiritual intelligence shows consistency and efficacy.

Keywords: Spiritual Intelligence, adaptability, efficacye ducational

Introduction:

Intelligence and adaptability of structures in the social communication since the establishment of the century and the twentieth century better relationships and communication is so important that the infrastructure necessary for the important variables in easier and better communication and educational situation is effect one of the variables that can affect school relationships, spirituality, harmony and self-efficacy that will be discussed.

It spirituality is universal and like excitement, degrees and different effects, may be conscious or unconscious, mature or non-mature, healthy or sick, simple or complex, useful or dangerous (vegan, 2002) emmons tried spirituality based on Gardner's definition of intelligence, intelligence within the applications.. Gardner criticized emmons and believes that aspects of spirituality that are related to the phenomenological experience (like the experience of the sacred or transcendent states) aspects of the rational, problem-solving and information processing separated. (AMRAAM, 2005: 6) can be due to

opposition from some researchers, like Gardner, about the question of spiritual intelligence involves motivation, desire, morality and character to make it look realistic understanding of intelligence attributed to them. (Nozzle, 2004: 47)

Intelligence, a concept that has long, one to study and examine all aspects of the protests, characteristics and types have been interested. In recent years, many scientific evidence for the existence of the data and intellectual as spiritual intelligence is obtained. According to recent findings, this intelligence, human intelligence is introduced and the final turning point in this regard is the meaning of life and pave the way for man to achieve Goal setting three aspects, benefits and working life (Islamiyah and Mohammadi, 2015).

Literature

The concept of spiritual intelligence was first proposed in 1996 by Stevens (Smith, 2009), and later expanded in 1999 by emmons. Spirituality and spiritual intelligence structures within a new structure combines the intelligence. The concept of spiritual intelligence

The concept of spirituality in the sense of individual search for holiness, knowledge and meaning and also the concept of intelligence means using these concepts to adjust and raise the level of human well-being is combined (Emmons, 2000).

Although much research has been done in the area of development of spiritual intelligence and experimental research is needed, but it can be said that this talent intelligence in different people and different environments rich in a collision with the spiritual questions disposes gradually evolved and shaped. It seems age and gender also influence in spiritual intelligence. Yong believes that in most people after age 35 made major changes in the unconscious that may affect the spirituality and spiritual intelligence. Also, some researchers, including Jung, believe that women are different from men this change takes place spiritual intelligence is defined by cognitive stimulation may be a set of coping skills and resources that facilitate problem solving and achieving the aims (Ceske, 2002; Wellman, 2001) spiritual intelligence, adaptive and functional cases in special occasions and everyday life (nozzle, 2004). It seems that spiritual intelligence of physical and cognitive relationships with their surroundings and go beyond the realm of intuitive and transcendent vision of the person in your life. This view includes all events and experiences of the people who have been affected by an overall look. One can use this intelligence for the benefit of their experiences there and reinterpretation. This process is capable of in terms of phenomenological experiences and events give a more personal meaning and value. (Nozzle, 2004).

Spiritual intelligence than the non-religious education and a realistic knowledge, intuition, vision and wisdom are closely related. Non-specific and holistic nature and use of symbolism perception expands and deepens it. This helps to enrich relationships and improve everyday work. In addition, the move toward self-actualization and spiritual growth more spiritual intelligence relates to the need to control and adhere to the rituals and traditions. It seems that people who have integrated spiritual intelligence may have different lifestyles (Mac Hawk, 2002, quoted of nozzles, 2004).

The purpose of the adjustment, the relationship is between the individual and his environment, especially the social environment there and lets them respond to their needs and motivations. However, when an adjustment is bound to be able Yash healthy relationship established between itself and the social environment and satisfy their motives, otherwise he will be considered to be incompatible. In fact, adaptation is a skill that must be learned and taught tens quality like any other person of interest and effort. To learn depends on (Eslami nasab, 1995).

Even when compatibility individual who can benefit healthy relationship established between himself and his social environment and their motivation to satisfy Otherwise, he would be considered incompatible adapting to the environment and those around them as well as with the qualitative characteristics of professional life - his studies, the most important organisms for Vghayt all our activities, so that all people at all times of your life,In the day and hour are entertaining, which is not altered and changed to adapt to the environment has changed and not changed. In fact, lived for nothing but practice is not compatible (Eslami nasab, 1995).

The results Bartlett and colleagues showed that spirituality can progress, adaptability and flexibility through the emotional experience positive emotions and positive attention to the lives of help. Also, spirituality directly with positive expression and understanding health related subjects (Bartlet, 2003).

Spiritual Intelligence includes a set of capabilities that enhance the adaptability and compatibility and capacity of individuals and the result is mental and physical health. Emmons also states that using spiritual intelligence information about the daily problems better solved or better comes along with them, thus increased his consistency and follow it protects the public health (Marshall, 2000).

American Psychiatric Association (1994) defines social compatibility: coordinate actions to meet the environmental needs that often requires reform momentum and nowhere is this or attitude (quoted Hejazi, 2006: 35.) Spirituality is highly related to one's overall health, so that spirituality as an important source for coping with stressful life events are considered. Spirituality is an individual who has a sense of well being and living alongside others and constantly trying to enjoy life and the people in your own being as well as to encourage enjoyment of life. As Elkins and Cavendish (2004) have stated, spiritual intelligence that makes human kindness and compassion is more to look at the problem, to better withstand the hardships of life and to give his life dynamics. Also, spiritual intelligence causes a person to gain deep insight life events and problems and the problems of fear (vegan, 2002).

According to the theory efficacy, low self-efficacy beliefs, determination and will weakens and disrupts performance; on the contrary, high self-efficacy beliefs, participation in a task, select the task, facilitates the effort and performance. The concept of spirituality and self-efficacy beliefs have a strong link with each other, so that self-efficacy beliefs and spirituality can be a very powerful incentive to improve the quality of life can be counted. Spiritual intelligence by trying, search the education and practice.

Conclusion:

Man to be judgment-esteem and mental health decisions that help growth requires spiritual intelligence (Mac Sherry, 2012) He stressed that spiritual intelligence is the foundation beliefs that influence the

performance of his, so that real-life figure formatting and increases the flexibility and efficacy in humans. This is done by promoting health and exercise self-starting and concerns about the overall development of the people. Obviously someone who does not succeed in his basic needs or unable to deal with the failure will not be able to think about the needs of other human beings.

According to the Department of Education the role of nurturing talented young force that the future of the country is get it so necessary attention to the importance of spiritual intelligence, academic self-efficacy and compatibility should be enough attention.
