Department of Public Administration, Mahabad Branch, Islamic Azad University, Mahabad, Iran

Abstract

The aim of study was to investigate the effect of a comprehensive system for orphan's honor the trust of supporters of Imam Khomeini Relief Committee (RA) is the southern province of West Azerbaijan. Therefore, it can be stated that the aim of this research, applied research approach is descriptive and survey. The population of this study included 8729 people from all supporters Relief Committee is south of West Azerbaijan province. A sample obtained by Cochran formula is 368 people. Stratified random sampling method is used. Standard questionnaires were used to assess these variables. The face and content validity to evaluate the validity and reliability of Cronbach's alpha was used to. In order to test the hypothesis Pearson correlation coefficient of linear regression was used. The results indicate that the R-squared value is equal to 241.0, which represents 1.24% of total system changes orphans honor the trust of supporters of the Imam Khomeini Relief Committee (RA) is the southern province of West Azerbaijan. Therefore, a comprehensive system for orphans honor the trust donors to Imam Khomeini Relief Committee (RA) affects South of West Azerbaijan province.

Keywords: Comprehensive System of Honoring Orphans, Supporters' Trust, Credibility, Benevolence, Wish

Introduction

Relief Committee is pushing the state government is oriented towards a society based on visions 20 years and is projected Relief Committee even though a lot of financial resources and public sector committee of the public participation has changed and in this way comes.

One of the grounds of public participation in the development of confidence-building assistance that appears in the current society has been altered slightly. Maybe informing about the functions of this revolutionary institution could be useful in eliminating doubts and clarification is very effective. The rapid developments in the field of information and communication technology requires the use of electronic services focused on enjoying put public service systems. Since the material poverty, cultural poverty after being persecuted, therefore the class needs is a very important issue for the public.

Has been defined in the Trust stated, it is clear that there are different approaches to the concept of trust. First, some definitions that instead of explaining the concept of the trust, the trustee characteristics (honesty, integrity and charity) point. In the second, the ability to calculate confidence, reliability and predictability between people is introduced. In the third, as expected, the confidence or the belief that people want others to know they are predictable way. In other words, we rely on others to consider our interests. The central idea of trust, that trust is based on an expected violation of these expectations, trust skew but not necessarily to create distrust.

Trust is something that is dependent on the interaction of various factors that can be effective in building trust scheme (Tyler, 2003: 601). Trust, confidence of having to others without compelling reasons (Smith and Mirani, 2005: 87). In fact, trust, we believe that the others will do the same thing That is expected of them under control without making them feel pressured (Lewis, 2007: 65).

Therefore, to serve the people in a transparent manner and without any documentation considered. But is this important relief has been able to trust people, including supporters reach your performance? The money and pay manually, but using special problems has led to bank payment systems could partially reverse the problem. The important thing is that there are now enjoying banking services Is donations and relief is the sponsoring orphans how to account for natural persons to deposit the money and Aries? Using this system could win public trust and transparency relief performance show?

It is now possible payment plan honor and bank accounts in most counties and regions provided support agencies and sponsors gentleman who has the support agencies are supporting ID, can pay their funds to accounts in the offices through the system is easy to do. With the implementation of a comprehensive system of support committee, livelihood assistance under the patronage of clients through the program committee be deposited into their accounts.in view of the priority distribution is covered. Although it appears that trust, the concept is clear to everyone it sounds obvious, but in fact it is not. When trying to definition of the concept we have, we realize that is not an easy task. The complexity, the more time is carried out research in this field to understand the concepts other than organizational trust is used.

Research question: Does the comprehensive system orphans honor affect the trust donors in committee Khomeini in south of West Azerbaijan province?

Conceptual Model

The graph below indicates the theoretical model of research funding and specifies the structure and nature of the investigation. This model represents relationships between two variables and dimensions of each component is original. It can also be shown that variable dimensions of transformational leadership on effective knowledge management.

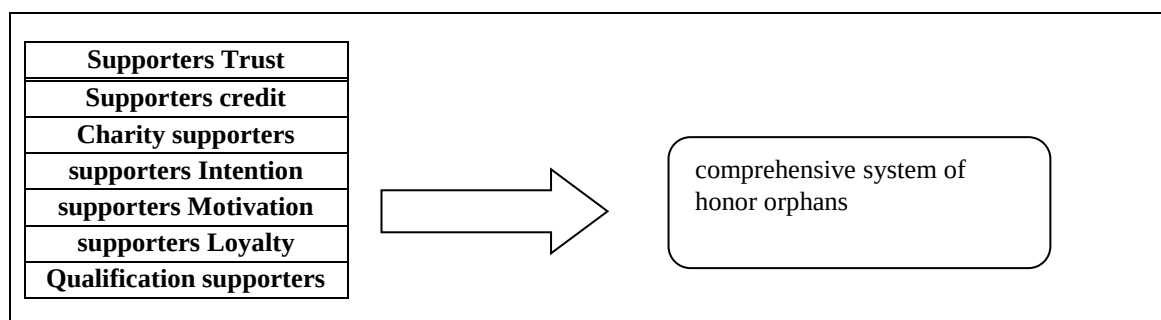

Fig 1: Conceptual Model

Methods

The aim of study was to investigate the effect of a comprehensive system of honor Orphans Relief Committee southern province of West Azerbaijan is a loyal supporter. The population of this study included 8729 people from all supporters Relief Committee is south of West Azerbaijan province. According to the results of the Cochran formula, the sample size was estimated to be 368 people. It is worth mentioning that this estimate is done at the level of 0.05. Since the population of the study included all supporters Relief Committee south of West Azerbaijan province is classified random sampling method.

In order to test the hypotheses of the study to measure the confidence of supporters of trust inventory and et al (2008) have been used. The self-made questionnaire orphans honor system and research-based operating model is designed. In this study is to determine the validity of the content validity and face validity has been used. Validity of the questionnaire for determining the comments of professors and advisors have been applied. About the validity Cronbach's alpha test with the following results were obtained using SPSS 22 software.

Table 1: Cronbach's alpha

Cronbach's alpha	Num. of Questions	index
0.875	30	Supporters trust
0.817	8	Orphans honor system

Given that in all cases the amount is larger than 0.7, the first version of the questionnaire proved to be a strong correlation with each other, and secondly, the research questionnaires, the reliability is high. Kolmogorov-Smirnov test for normality test data will be used. In order to test the hypothesis regression test was used.

Results

According to the Kolmogorov - Smirnov if the significance level for all independent and dependent variables larger than the surface of the test (0.05) is a normal distribution of data.

Table 2: result of Kolmogorov – Smirnov test

	Supporters credit	supporters Charity	supporters Intention	supporters Motivation	Loyalty supporters	supporters Qualification	Orphans honor system
Frequency							
Kolmogorov-Smirnov statistic	368	368	368	368	368	368	368
significance level	1.058 0.075	0.434 0.324	0.368 0.211	0.540 0.145	1.030 0.061	0.724 0.105	0.400 0.176

According to the results obtained in the above tables and since a significant level (sig) obtained for the tests larger than the error level (α) which is 0.05, assuming normal distribution of data accepted and can be used to evaluate the hypothesis parametric methods.

testing of the main hypothesis: Comprehensive system for orphans' honor affects the trust of supporters of the Imam Khomeini Relief Committee (RA) South of West Azerbaijan province.

Table 3: result of hypothesis

Frequency	Significance level	Direction	Coefficient	Correlation
368	0.000	positive	0.491	Pearson

Pearson correlation coefficient between the two variables mentioned comprehensive system for orphans honor the trust of supporters of the Imam Khomeini Relief Committee (RA) south of West Azerbaijan province, which amount almost equal to the amount 0.491 is acceptable. However, the significant level of 0.001 can be concluded that there is a significant correlation. In other words, the null hypothesis is rejected on no association between the two variables comprehensive system for orphans honor the trust of supporters of the Imam Khomeini Relief Committee (RA) in the south of West Azerbaijan province.

Table 4: result of hypothesis

R-square	Sig	F	Mean Square	Degree of freedom	Sum of squares	model
0.241	0.000	119.913	18.622	1	18.622	regression
			0.155	366	58.546	Remaining
				367	77.168	total

R-squared value is equal to 0.241, which represents 24.1% of total system changes orphans honor the trust of supporters of the Imam Khomeini Relief Committee (RA) is the southern province of West Azerbaijan, according to a significant level of 5% less can be said that this model fits the data (in other words the significance level of less than 0.05 Sig value that represents the linear relationship of trust orphans Project Designer honor supporters of the Imam Khomeini Relief Committee (RA) southern Province West Azerbaijan.

Table 5: result of hypothesis

Sig.	t	Standardized regression Coefficient impact	Standardized regression Coefficient impact		model	
		Beta	Std. Error	B		
.000	8.875		.183	1.620	Intercept	1
.000	10.950	.491	.049	.539	Comprehensive system of honor orphans	

Factor regression effect two categories:

A) The impact factor is not standardized regression (B)

B) standardized regression coefficients were not affected (Beta)

Standardized regression coefficients were not affected; the coefficients of the regression model are satisfied that this hypothesis is as follows:

(Trust supporters Relief Committee) $0.539 + 1.620 =$ comprehensive system of honor orphans

But given that the regression analysis, scale independent variables are often composed of different units, so it cannot easily compare the contribution of each independent variable in explaining the change or variance of the dependent variable pay, so the impact of standardized regression coefficients are not (Beta) we use, so we have:

(Trust supporters Relief Committee) $0.491 =$ comprehensive system of honor orphans

Table 6: The summarizes of testing research hypotheses are shown in following table.

result	Significance level	Regression coefficients	Correlation Coefficient	Research hypothesis
positive impact	0.241	0.000	0.491	Main hypothesis
positive impact	0.347	0.000	0.589	First hypothesis
positive impact	0.144	0.000	0.368	second hypothesis
positive impact	0.094	0.000	0.307	third hypothesis
positive impact	0.097	0.000	0.312	fourth hypothesis
positive impact	0.116	0.000	0.340	fifth hypothesis

Due to the significance level of 5% less can be said that this model fits the data. In other words, the significance level is less than 0.05 Sig value that represents the linear relationship between the variables. Results also indicate that there is significant effect on the dependent variable.

Discussion and Conclusion

Imam Khomeini Relief Committee (RA) in the south of West Azerbaijan province should focus on social networking sites around the Imam Khomeini Relief Committee to serve in such poor shape that the

network works for social, cultural and economic conditions in the country in foundations. For this purpose, it is necessary to develop the system Relief Committee acted in the first place and to strengthen the system at a later stage in categories such as credit supporters, benevolence, good sponsors, supporters and the loyalty of supporters emphasize motivation.

Imam Khomeini Relief Committee (RA) must focus south of West Azerbaijan province on the credibility of its own supporters' systems on automation in these systems should ensure that their words are consistent with the actions of others, is proven.

It is recommended to Imam Khomeini Relief Committee (RA) south of West Azerbaijan province in its own systems and potential scope of the trustee identify. The system must be confiding benevolence reflects certain achievements trustee for.

It is recommended to Imam Khomeini Relief Committee (RA) south of West Azerbaijan province comprehensive system of honor and orphans in your portals to replace. This portal should reflect the aspirations and goals of the organization supporter of the content of this portal should provide a positive action and motivate the individual.

The Imam Khomeini Relief Committee (RA) south of West Azerbaijan province, supporters feel safe in their system and job stability, cooperation and effective role in the organization and also create vitality and joy. These factors have created excitement among the people lead and improve the level of participation in the Imam Khomeini Relief Committee.

It can be proposed that the portal to employee loyalty should be in line with its goals and lead. Recommended that a comprehensive system of orphans' honor Imam Khomeini Relief Committee (RA) in the southern province of West Azerbaijan, the relationship between honesty and trust, the trustor and the trustee to prove. In the portal is obliged to promote the principles upon which the trust is established. It should also promote mutual cooperation in a way for which people are interested in each other than the advancement and promotion of social interests to be diligent and plans and objectives should be defined in this respect in the system.
